

SERRADELLAS & MEDIC		SOWING RATE KG/HA	RAINFALL MM	APPROX. DAYS TO FLOWERING IN PERTH	IDEAL SOIL RANGE LS/S/L/H	LOW PH (P) WATERLOGGING (W) SALINITY TOLERANCE (S)	PRODUCT DESCRIPTIONS	
FRAN ₂ O SERRADELLA	Earlier season then Margurita and suited to acid soils.	5 to 8	300+	90	LS-L	P	Fran ₂ o is a new improved variety of Margurita Serradella offering an all year round pasture seeding option if seeded as a podded seed (sowing rate 15-20kg) in summer. Hard seeded, pink flower with a shorter time to maturity than Margurita. Suited to acid sandy or loamy soils. Highly palatable and very productive in spring with a high nutritive value. (Pink Flower).	G/S
MARGURITA SERRADELLA	Deep rooted and hard seeded.	6 to 10	350+	107	LS-L	P	A pink flowered medium maturing, hard seeded variety. Margurita has an erect growth habit with good production through early - mid spring. Should be sown as bare seed where pasture is required in year 1. Pod seed can be sown in February @ 20kg/ha, shallow(10mm) and will soften by the break of the season. (Pink Flower).	G/S
ELIZA SERRADELLA	Improved Cadiz variety.	10 to 20	350+	80	LS-L	P	Eliza is a soft seeded pink flowering French Serradella with more early vigour than Cadiz. Higher seeding rates required, as 60% of the weight is pod not seed. Tolerates lower pH soils. Deep rooted behaviour on deep sandy soils can extend the growing season. Low bloat risk. (Pink Flower)	G
SANTORINI SERRADELLA	Excellent producer can be indeterminate in its flowering.	6 to 10	350+	95	LS-L	P	A very hard seed, yellow flowered Serradella. Santorini does not suffer leaf loss or lodge like French Serradella and as a consequence holds the lower leaves resulting in better production. Sow as pure seed where pasture required in year 1. Toughest of all Serradellas that withstands heavy grazing (Yellow Flower).	G/S
SERRAMAX SERRADELLA 	Hard seeded. Highly regenerative.	6 to 10	300+	95	LS-L	P/W	WA bred new variety that is an early flowering, hard seeded, yellow serradella with a semi erect growth habit and an increased rate of hard seed breakdown which favours strong regeneration. Suited to acidic sands and sandy loams, it establishes quickly reducing early weed competition. Suitable as a permanent pasture improving soil fertility and boosting yields for subsequent crops (Yellow Flower).	G/S
CAVALIER MEDIC	Spineless Burr variety with good waterlogging and salinity tolerance.	10 to 15	350+	90	LS-L	P/W/ Mild S	A medic with a relatively high percentage of soft seed compared to Santiago, which will result in more densely regenerated second year pastures. Cavalier has pest and disease tolerances, a broad range of maturity and the percentage of hard seededness provides both persistence through cropping phases and a better response to environmental variations.	AM

ALTERNATIVE CROPS		SOWING RATE KG/HA	RAINFALL MM	IDEAL SOIL RANGE LS/S/L/H	LOW PH (P) WATERLOGGING (W) SALINITY TOLERANCE (S)	PRODUCT DESCRIPTIONS	INOCULANT
Alternative crops which assist in providing additional options for fast establishing forage and cover crops that also provide benefits for soil improvement. Some can be used for green manure or as a bio fumigant crop while others are suited to providing forage after summer rainfall events or legume or herb options under very intensive grazing systems.							
BOUNTY SORGHUM	Fast establishment. High feed value and dry matter yields.	10 to 20	350+	H	P	Early to mid-maturing variety with high leaf to stem ratio, suitable for grazing, hay and silage. Good tillering and quick regrowth post grazing. Drought tolerant with high dry matter production. Plant in late spring/summer where soil temperatures are 16°C and rising. Coated and treated with Gaucho and Thiram	
BUCKWHEAT	Summer cover crop option.	50	550+	S-L		Is not a cereal but a speedy short season summer cover crop option with a dense root system providing a good soil conditioner before the next autumn crop. Cover crops suppress weeds and attract beneficial insects and pollinators with their abundant blossoms. Good companion to add to a cover crop mix.	
BLACK MUSTARD	Natural Biofumigant for pest and disease control.	6 to 10	400+	S-H		A natural biofumigant grown in areas where soil borne pests and diseases are a problem. When cut and mixed into the soil it acts as a natural biofumigant and helps reduce soil-borne pests and diseases, builds soil organic carbon, improves soil structure, and increases the soil's ability to hold nutrients and moisture. It also boosts overall productivity, suppresses weeds, and reaches maturity in approximately 12 to 14 weeks.	
CEREAL RYE	Inexpensive cover crop.	80 to 100	350+	L-H	W	Ideal for providing a reliable pasture in drier years, getting early grazing in cold climates, and filling a feed gap in autumn and winter.	
JOEY TRITICALE	Versatile, reliable and high yielding.	60 to 100	400+	S-H	P/W	Known for excellent winter forage, fast growth, and good drought/acid soil tolerance, making it a top choice for grazing, hay, silage, and cover crops. This hybrid grain (wheat x rye) combines the hardness of rye with wheat's productivity offering high yields and quality feed.	
EBONY COWPEAS	Fast growing, multi purpose legume. Drought tolerant.	15 to 20	500+	S-H	W	High nutritional value and palatability. Good soil conditioner and adapted to a wide range of soil types. Easy and quick to establish, high yielding with high seed production. Seed rate as a monoculture or in a mix will depend on soil moisture and/or irrigation. Ensure soil temperatures are 16°C and rising.	I
VETCH - COMMON - POPANY	Multipurpose legume that can be used for forage or soil improver.	(C) 40 to 45 (P) 30 to 35	(C) 300+ (P) 450+	L-H	(C) W (P) W	Common vetch (C) is a highly palatable annual forage suitable for grazing, hay, or grain, while also improving soil fertility, structure, and organic matter and acting as an effective break crop. It suits drier areas and systems requiring early grazing or grain. Popany (P) is a later-maturing variety (130-days) best suited to higher rainfall areas, providing valuable late-season feed for grazing, hay or silage, and green manure.	E
FREYRS SUNN HEMP	Summer legume cover crop best suited to north of Perth.	10 to 20	350+	LS-H		A good legume component to a summer cover crop mix. Very good as a Green and Brown Manure option being short season producing high levels of Biomass. Fast to establish so suppresses weeds. Benefits the soil by reducing nematode levels and increases soil nitrogen being a legume. Reasonable heat and drought tolerance. Also produces an abundance of yellow blossoms to attract beneficial insects and pollinators. Suited for areas north of Perth.	
WINFRED FORAGE BRASSICA	All rounder forage and companion species.	3 to 4	500+	S-H		A versatile, early maturing forage brassica, an outstanding option for cheap feed, suited to a wide range of soil types and environmental conditions, stock classes and sowing times. Good drought and frost tolerance with excellent regrowth potential with flexibility to perform well through summer and carry later into the season as winter feed is required.	
COOGEE FIELD PEAS	Excellent nitrogen fixation in soils. Offers multiple options.	80 to 100	350+	S-H	P/S	Coogee is an improved dun pea variety with rapid early growth, high biomass, basal branching, and longer vines, maturing slightly later than Parafield. It resists powdery mildew, tolerates boron and salinity, and offers flexibility for forage, stockfeed, or use as a green/brown manure or hay, depending on seasonal conditions.	F/E
SHIROHIE MILLET	Fast growing crop for summer rainfall events.	10 to 15	300+	S-L	S/W	Sow when soil temperatures exceed 14°C. Should not be grazed until plants are well anchored, 20-30cm in plant height. Adequate fertiliser should be applied after each grazing. Has some salt tolerance but not frost tolerant. Fast growing, high production.	
SIX POINT CHICORY	High quality summer forage.	4 to 8	550+	LS-H	W	High quality feed and often sown in a mix of grasses and clovers at 2-5kg per hectare. Tolerant of waterlogging and drought periods, with a very deep tap root known to assist with breaking up the soil and enabling moisture to be drawn from deep within the soil profile. Can regenerate if allowed to go to seed. Parasite inhibiting properties, safe for animals and does not cause staggers.	
SUNFLOWER - COMMON	Good cover crop option to include in mixes.	5 to 8	350+	H	W	Plant at a soil temperature of over 14°C. Survives best in a soil pH of above 5. Good component to a cover crop mix as Sunflowers have a robust root system that enables them to capture nutrients that are available in the soil. Sunflowers also are good for Mycorrhizal Fungi growth.	
TILLAGE FORAGE RADISH	Compaction buster with good forage production.	5 to 8	400+	S		Achieves rapid ground cover providing a quick, highly palatable grazing feed for sheep and cattle. Draws up subsoil nitrogen and nutrients, green manure biomass, aerates soil, breaks down compacted soil. Sowing depth 0.75 to 2.5cm	
KARAKA LEAFY TURNIP	Highly palatable, fast growing feed.	4 to 5	500+	L-H		This annual hybrid brassica offers quick, high-quality, and palatable feed, delivering high yields through multiple grazes when grown on fertile soils and managed effectively.	
TONIC PLANTAIN	Mineral rich year-round perennial grazing herb.	3 to 10	600+	L-H		A highly digestible and nutritious perennial herb that establishes quickly and can be grown on a wide range of soil types. It has a deep root system so relatively drought tolerant with good winter and spring growth. Tolerates frequent grazing. Has high levels of protein. For sheep, dairy and beef cattle.	

SUB TROPICAL PERENNIAL GRASSES AND MIXES		SOWING RATE KG/HA	RAINFALL MM	IDEAL SOIL RANGE LS/S/L/H	LOW PH (P) WATERLOGGING (W) SALINITY TOLERANCE (S)	PRODUCT DESCRIPTIONS
NORTHERN PERENNIAL MIX	Mainly Panic with Rhodes grasses.	6 to 8	300+	LS-L	Mild S	Suited for areas north of Perth. A mix ideally adapted to a wide range of soils. A larger portion of the mix is Gatton Panic with the remainder being Rhodes grass. Sustainability and productivity of this pasture mix is highly relative to allowing it ample time to establish and managing its grazing appropriately. Also suited to areas for stabilisation, like mine rehabilitation and road verges etc.
SOUTHERN PERENNIAL MIX	Panic with Rhodes grasses, Phalaris and Kikuyu.	6 to 8	300+	LS-L	Mild S	Suited for areas south of Perth. Persistent and productive perennial mix which if allowed to establish with adequate moisture will continue to be productive in summer with the appropriate grazing systems. Suited to areas for stabilisation, like mine rehabilitation and road verges etc.
GATTON PANIC GRASS	Deep rooted and drought persistent.	4 to 8	300+	LS-L	W	Very popular perennial grass which is very persistent and has increased productivity in areas with summer rainfall. Gatton has a broader longer leaf and better palatability than green panic. Gatton Panic is tolerant to shade. Suited to well drained soils but will perform on other soils with good fertility. Responds quickly after rain. Does not tolerate waterlogging. Sensitive to frost. Coated and treated with Gaucho.
CARPET GRASS	Short perennial, stoloniferous, dense mat-like spreading grass.	8kg pasture; 100kg turf	650+	S-H	P/W	Good choice for areas with poor soil conditions, low fertility and shade. Not drought or saline tolerant. An alternative to Kikuyu and Bermuda Couch Grass. Coated and treated with Gaucho.
CALLIDE RHODES GRASS	Performs well in acidic and low fertility soils.	4 to 8	400+	LS-L	W/ Mild S	Callide is a Tetraploid variety and later flowering than Katambora. It exhibits stolon density similar to Katambora. Requires a higher rainfall than Katambora. Callide can be more palatable and productive than Katambora under better fertility conditions. Coated and treated with Gaucho.
FINECUT RHODES GRASS	Proven in WA across a wide range of soils. Silage or hay.	4 to 8	300+	LS-L	Mild S	Finecut is a fine leaved selection from Katambora giving improved establishment vigour, higher palatability and increased production. Ideal hay option. One of the more productive of the Rhodes grass options. Coated and treated with Gaucho.
KATAMBORA RHODES GRASS	Popular variety with prostrate growth habit.	4 to 8	300+	LS-L	Mild W/ Mild S	Older variety with prostrate spreading habit. Widely adapted and easily established. Tolerates heavy grazing once established. Provides Nematode resistance. Is more tolerant of lower temperatures. Coated and treated with Gaucho.
RECLAIMER RHODES GRASS	High salinity tolerance. Suits wide spectrum of soils. Hay option.	4 to 8	300+	LS-L	S	Reclaimer is a salt tolerant early maturing, erect, warm season, highly stoloniferous perennial Rhodes grass that has retained the attributes of Finecut but with increased stolon density and number of growing points giving increased plant recruitment. Will provide more rapid ground cover than other varieties. Excellent hay option. Coated and treated with Gaucho.

BIOLOGICALS	PLANT BIOSTIMULATOR	PRODUCT DESCRIPTIONS
	MICROBIOLOGICAL PRODUCT FOR SOIL TREATMENT AND SEED COATING (Powder)	BioNPK Powder S contains beneficial microorganisms that convert nutrients N, P, K into plant-available forms, improving nutrient uptake. Mycorrhizal fungi enhances phosphorus and water absorption while protecting roots from pathogens, and Trichoderma viride fungus promotes healthy strong root development, plant growth and resistance to stress factors. Applied in water with an adjuvant, BioNPK Powder S can be used as a soil treatment or seed coating, is compatible with other biologicals, fertilisers, pesticides and liquid urea sprayed onto bare soil at 100–200L of water per application.
SOIL RANGE KEY:		LS - Light Sands S - Sands L - Loam H - Heavy

This Pasture Growers Guide provides a brief description and broad based recommendations on the listed varieties and public material as to their main production characteristics. To get more detailed information always consult your local agronomist. Most varieties listed on this chart are protected under the Plant Breeders Rights Act 1994 and amendments. Unauthorised commercial propagation or sale of these varieties is an infringement under the Plant Breeders Act.
